Rodengo Saiano, March 2011

Subject: A 'classy' choice

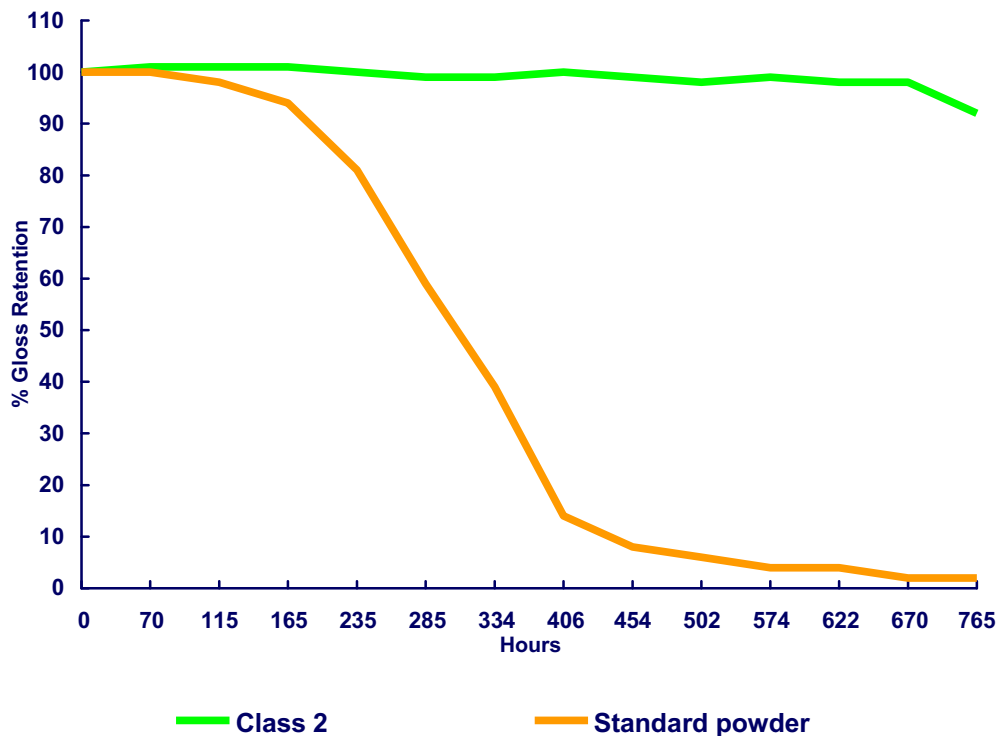

Dear Partner,

Metra has always been attentive to the needs of the market and has always satisfied the requirements and needs of the great international façade makers, who, in order to meet the demands of the large design firms, have started to use class 2 polyester powders for profile finishes.

Use of class 2 polyester powder satisfies the need to ensure superior quality to the products, greater duration of colour over time, better degradation and duration of the gloss effect.

'Class 2' ensures better performance of the coated product, as demonstrated by our test results.

**Comparison with Qualicoat II performance limits
5 years of exposure in Florida (5°S)**

Metra Color currently pre-treats profiles according to Qualicoat guidelines and uses the Qualicoat “Sea Side” method, which improves corrosion resistance in coated products, as shown in the neutral salt spray test and in the Florida cases. Metra Color would like to share with the market the decision to move to “Class 2”.
